

Planning Phase

- Define Roadmap for the Project
- Research into sky classification topic
- Specify ANN requirements
- Define Project Motivation

Data Acquisition

- Await Dataset Access while it is being organized

Implementation and Initial Testing

- Initial simple neural network model
- Gradually build on it
- Perform initial tests with a few parameter combinations
- Discuss acquired results

Final Implementation and Experimentation

- Final adjustments to the network after execution time and analysis of experiment results
- Repeat experiments after final adjustments

Project Documentation
